## **RE: SEEDING DOCUMENTATION FOR MENELEE MINING CORPORATION'S BLACK SPRING MINE, MCKINLEY COUNTY, NEW MEXICO**

Dear DJ:

On behalf of Menefee Mining Corporation (MMC), we are submitting the following documentation of the seeding of an area of a little more than 4 acres of previously disturbed and regraded acreage at the Black Spring Mine (see attached map). This work was completed in accordance with anticipated Permit Modification 20-1 to Permit no. MK026MN and the Mining and Reclamation Plan (Ecosphere, 2011). Permit MK026MN is a minimal impact mining permit under the New Mexico Mining Act and Rules. The mine is in the southwest corner of Section 4 Township 19 North, Range 5 West about 5 miles south of Ojo Encino, New Mexico. The disturbed area was ripped and seeded by MMC on August 3<sup>rd</sup>.

MMC reseeded the area using a small tractor and seeder (see attached photographs). The seed was procured from Stevenson Intermountain Seed, Inc. (see attached invoice). The only deviation from the prescribed seed mix in Ecosphere (2011) was a substitution of Crested wheatgrass-Ephraim (Lot no. SF2-B1) for Slender wheatgrass. The Slender wheatgrass was unavailable from the supplier at the time of the order.

The seed was broadcast using the pounds(lbs)-per-acre rate specified in Ecosphere (2011). MMC ordered 104 lbs of seed mix, which was delivered in 2, approximately 50-lbs, bags. It was applied at a targeted rate of 22 lbs per acre. The ripped area was divided into two approximately two-acre plots (area to be covered with each 50 lb bag of seed) and staked to allow the tractor operator to better distribute the seed across the area.

The reclaimed/reseeded area will be monitored, and the revegetation performance evaluated beginning after the second growing season (around September 2021). MMC has established two reference areas near the mine for the purpose of evaluating the reclamation.

Please let me know if you have any questions or would like additional information.

Sincerely,  
**Toltec Mesa Resources LLC**
