Carmen,

St. Cloud accepts MMD changes to the Technical standards submitted August 17, 22.

1. Change the vegetation community used to set the vegetation standard to the blue grama / snakeweed.
  2. Change standard from 70% of that community cover to 75%.
- Essentially, Carmen's requests change the desirable ground cover standard from 17.91% to 32.70% (75% of 43.60%).

Thank you

Hi Audie,

Carmen called me yesterday to discuss two small changes to the plan, which in my opinion don't really risk the desired outcome for the project (release in 2023).

1. She wants to change the vegetation community used to set the vegetation standard to the blue grama / snakeweed.
2. She also wanted to increase the standard from 70% of that community cover to 75%.

Essentially, Carmen's requests change the desirable ground cover standard from 17.91% to 32.70% (75% of 43.60%). Since the revegetation is performing well, this should not be an issue.

She also said we could just email her an updated plan rather than formally submit again. Overall, she was happy with the rest of the plan.

If you are all good with this, I will make the changes and get her the updated report.

Let me know if you have any concerns.

Jesse

Hello Audie,

Please find the attached revegetation evaluation protocols for the San Pedro Mine. I would like to get this into the state as soon as possible.

Please review and let me know if you have any feedback or comments.

Thanks

Jesse
