URS Corporation (URS) conducted the pre-construction soil and vegetation sampling event as part of the Demonstration Solar Facility and Alternative Cover Depth Project at the Chevron Mining Inc. (CMI) Questa Mine located in Questa, New Mexico (Figure 1). The objective of the pre-construction sampling was to create a baseline for comparison of soil and vegetation results collected in subsequent years and to evaluate the effectiveness of various cover depths for the protection of human health and the environment. This report presents a summary of field activities, modifications from the sampling plan, tabulated results, and provides Appendices containing field documentation (photographs and field data sheets) and the data validation reports and lab data packages.

1.0 FIELD ACTIVITIES

Field activities for the preconstruction soil and vegetation sampling were conducted between April 26 and May 3, 2010. A kickoff meeting was held Monday, April 26, 2010. Field sampling activities began on Tuesday, April 27, 2010. A 3-person field team collected interim cover soil, tailing, above ground and below ground (root) vegetation (grass, forb, and shrub), and root zone soil samples. Samples were collected from 27 locations in 3 different cover depth plots within the northeastern portion of the tailing facility that was designated as the Alternative Cover Depth project site (Figure 2). Each cover plot contained 3 transects per plot and 3 sample locations per transect were collected. Interim cover soil and tailing samples were collected within a 1-foot radius of the staked location for each of the 27 sample locations.

In addition, six soil samples were collected from a proposed borrow material source area located northwest and southwest of the project site (Figure 2). Not all vegetation types were available at the 27 locations. A root zone soil sample was only collected when a root sample was collected (i.e., the vegetation type was present at that sampling location). Sample locations are presented on Figure 3. In summary, the following samples were collected:

- 27 tailing samples;
- 27 interim cover soil samples
- 47 root zone soil samples;
- 94 vegetation samples (i.e., 47 above and 47 below ground plant tissue samples);
 - 48 grass samples;
 - 26 forb samples;
 - 20 shrub samples;
- 9 bio-accessibility samples
 - 5 grass root zone samples;
 - 2 forb root zone soil samples; and
 - 2 shrub root zone soil samples.

Field activities were conducted in general accordance with the Quality Assurance Project Plan (QAPP), Standard Operating Procedures (SOPs) and Sampling and Analysis Plan (SAP) that were developed for this project. Photographs together with a photographic log are included as Appendix A. Field data sheets of soil, tailing, and vegetation samples are included as Appendix B.

2.0 MODIFICATIONS FROM SAMPLING PLAN

Two modifications from the sampling plan were identified and implemented in the field. Vegetation and root zone soil samples were collected within a 2-meter radius of the staked location, a modification to the 0.5-meter radius as described in the SAP. Transect lengths were adjusted to 80 feet instead of 25 meters, and two of the sampling points were located on the west and east end of each transect line.

3.0 SAMPLING ACTIVITIES

3.1 Soil/Tailing Cover Sampling

Interim cover soil and tailing samples were collected with decontaminated trowels from the side walls of shallow trenches that were excavated by hand using a clean shovel. Root zone soil samples were composited from the root zones of the respective vegetation type (i.e., grass, forb, shrub) and consisted of soil and tailing material depending on the rooting depth of the respective plants. Root zone soil samples were collected by using a shovel to uplift the root portion of the plant from the ground. The soil/tailing material associated with the root zone of the plant sample was placed in the stainless steel bowl. Soil and tailing samples, once collected in a stainless steel bowl, were homogenized by mixing with gloved (nitrile) hands and/or a decontaminated stainless steel spoon. Organic material such as roots and leaves, and pebble and gravel-size fractions were removed by hand during the mixing process. Samples were placed in laboratory provided clean jars or in 1-gallon Ziplock bags (bio-accessibility tests). Sample containers (i.e., jars and Ziplock bags) were properly labeled to include sample name, sample date and time, analysis requested, and required preservation. Sample containers were placed in coolers on wet ice while awaiting transport to the laboratory. All samples were shipped under chain of custody to TestAmerica Burlington and the University of Colorado.

Interim cover material thicknesses were measured between 3 and 12 inches consisting of brown to reddish brown sandy, clayey silt to silty, clayey sand with few to some gravel and cobble (Table 1). Interim cover soils were collected from ground surface to 3 inches below the ground. Tailing material consisted of light gray to gray clayey, silty to silty fine to medium sand consistent with tailing material found at other (historic) tailing ponds at the tailing facility. Tailing material was sampled from the soil/tailing interface to 3 inches below that interface.

3.2 Vegetation Sampling

Vegetation sampling and the choice of plant species was limited by the early season. Table 2 provides a list of the plant species available at the time of sampling. For grasses, intermediate wheatgrass had a good amount of fresh green growth and was available at most sample sites. Indian ricegrass was collected at a few sites where intermediate wheatgrass was not available but required additional processing time to separate last year's old material from the limited amount of new growth. Available forbs were just beginning to grow and typically had new stems that were in a rosette 1 to 3 inches long. New stems with leaves were cut or pinched off the plant. Only one shrub was generally available, rubber rabbitbrush. Table 3 provides a list of plant species available at each sampling location. Most of the material collected for this species consisted of green stems with very young green leaves. The typical sampling method for the

three life forms was to lift the plants out of the ground by inserting a shovel below the estimated maximum root depth and leveraging the entire plant and root zone soil out of the ground. This was effective for the sampled species including rabbitbrush up to approximately 15 inches tall. Larger rabbitbrush plants were mostly not sampled because digging holes around the crown to extract roots was found to be much less effective. The root zone soil sample was collected from around the roots as the plants were lifted from the ground. The aboveground and belowground parts were then clipped off, bagged, and washed. Only the small and intermediate sized roots were collected, up to about 10 mm diameter, and larger taproots of forbs and rabbitbrush were not used. Table 4 provides the description for each of the vegetation and root zone soil samples collected. For some of the forb samples, the new soft aboveground growth was collected by pinching rather than clipping. Aboveground and belowground vegetation samples were washed with distilled or deionized water until no visible discoloration of the wash water was noted. Washed samples were gently dried using paper towels before placing vegetation samples in new and labeled Ziplock bags. Samples were shipped in coolers on wet ice under chain of custody to TestAmerica.

3.3 Borrow Sampling

Six soil samples were collected from the proposed borrow area (Figure 3). Four composite samples (BA1 through BA4) were collected from the exposed, vertical portion of the eastern side of the highwall of the identified borrow material source for particle size analysis, and analysis of molybdenum, primary and secondary nutrients, and other pertinent agricultural parameters as described in the project-specific QAPP (Figure 4). Talus along the toe of the highwall was not collected for analysis. The east side of the borrow area was sub-divided in four sections, which comprised the 4 composite samples. At each location, soil (i.e., borrow material) sub-samples were collected in clean 1-gallon buckets, which were transferred into clean (new) 5-gallon plastic buckets. Soil sub-samples were collected directly into the 1-gallon bucket by scraping soil material from the highwall using a clean stainless steel trowel. The highwall was estimated to be between 20 and 30 feet in height. The exposed, vertical portion of the highwall was estimated to account for approximately 20 to 60 percent of the total height of the highwall (see attached photographs).

Two additional composite soil samples (BA5 and BA6) were collected from the top of the borrow area for molybdenum analysis performed by TestAmerica (Figure 4). Soil samples were collected from ground surface to 6 inches below ground from 10 sub-sample locations spaced on 2-foot centers. Samples were placed into a clean stainless steel bowl. The composite samples were mixed using gloved (nitrile) hands or a stainless steel trowel. Following mixing (homogenization), soil samples were placed in laboratory provided, clean jars, and stored in coolers on wet ice while awaiting transport to the laboratory. Samples were shipped under chain of custody to TestAmerica.

3.4 Laboratory Analysis/Results

Soil (interim cover and root zone), tailing and vegetation samples were submitted to TestAmerica's Burlington, Vermont laboratory for molybdenum analysis. Nine select root zone soil samples were submitted to the Laboratory of Environmental and Geological Studies of the

Department of Geological Science of the University of Colorado in Boulder, Colorado for molybdenum in-vitro bio-accessibility analysis.

Soil, tailings and vegetation samples were analyzed by TestAmerica for molybdenum per methods specified in the project-specific QAPP. Laboratory analytical data are summarized in Table 5 (soil/tailing, vegetation, and root zone soil sampling results, and molybdenum in-vitro bio-accessibility results).

The borrow material samples were shipped to TestAmerica for particle size and molybdenum analyses. Particle size analysis was performed according to ASTM Method D422. Sieve sizes ranged from 3-inch (cobble size particles) to sieve #200 (fine size particles). Upon sieving (particle size analysis), the less than 2-millimeter (mm) fraction was combined, homogenized and a sub-sample collected and analyzed for molybdenum. The remainder of the less than 2-mm fraction was submitted by TestAmerica under chain of custody to the Helena, Montana laboratory of Energy Laboratories, Inc (Energy Labs) for analysis of agronomical parameters as described in the QAPP and to evaluate the soil texture, and the sand, silt, and clay content of the less than 2-mm fraction. Table 6 provides the borrow sample results for agronomical and physical parameters. Table 7 provides the particle size results for the borrow samples.

Laboratory data were validated in accordance with the QAPP (URS 2010). Data validation summary reports are included as Appendix C. Complete laboratory data packages are included as Appendix D.

Table 4
DESCRIPTION OF VEGETATION AND ROOT ZONE SOIL SAMPLES
CMI Questa Mine
Soil and Vegetation Sampling Event
April/May 2010

| Sample Location | Species | Number of Individuals Sampled (Above ground, Root) | Aboveground Sample | | | Belowground Sample | | |
|-------------------|-------------------------|--|----------------------------------|---------------------------|--|--------------------------------|--|---|
| | | | Average Height of Sampled Plants | Sampling/ Clipping Height | Description | Average Observed Rooting Depth | Description | Root Zone Soil Description |
| Grasses - Cover 1 | | | | | | | | |
| TR1-1 | Intermediate wheatgrass | 5, 5 | 7 inches | 0.5 inch aboveground | All leaf material, small amount of insect holes, small amount of yellow attenuate tips | 4 inches | Fibrous roots, ¼ mm-2 mm diameter, 4 inches long, tan, rhizomes in sample | Reddish brown clayey silt, few gravel |
| TR1-2 | Intermediate wheatgrass | 5, 5 | 4 inches | 0.5 inch aboveground | All leaf material, moderate amount of yellow insect spots and small amount of yellow attenuate tips | 4 inches | Fibrous roots, ¼-2 mm diameter, 4 inches long, tan, rhizomes in sample | Reddish brown clayey silt, few gravel |
| TR1-3 | Intermediate wheatgrass | 5, 5 | 3 inches | 0.5 inch aboveground | All leaf material | 5 inches | Fibrous roots, ¼-2 mm diameter, 5 inches long, tan, rhizomes present. Even though plant appears to be stunted aboveground, root system is well developed | Reddish brown clayey silt, few gravel |
| TR2-1 | Intermediate wheatgrass | 5, 5 | 5 inches | 0.5 inch aboveground | All leaf material, some yellow attenuate tips | 4 inches | Fibrous roots, ½-2 mm diameter, 4 inches long, tan | Brown clayey silt, some gravel |
| TR2-2 | Intermediate wheatgrass | 5,5 | 6 inches | 0.5 inch aboveground | All leaf material, minor amount of yellow attenuate tips | 6 inches | Fibrous roots, ¼-2 mm diameter, 6 inches long, tan, rhizomes present | Reddish brown clayey silt, some gravel |
| TR2-3 | Intermediate wheatgrass | 5, 5 | 8 inches | 0.5 inch aboveground | All leaf material, minor amount of yellow attenuate tips | 8 inches | Fibrous roots, ¼-2.5 mm diameter, 7 inches long, tan, | Reddish brown clayey silt, some gravel |
| TR3-1 | Intermediate wheatgrass | 5, 5 | 6 inches | 0.5 inch aboveground | All leaf material | 4-6 inches | Fibrous roots, ½-2 mm diameter, up to 6 inches long, white -tan | Dark brown sandy silt, some gravel |
| TR3-2 | Intermediate wheatgrass | 5, 5 | 7 inches | 0.5 inch aboveground | All leaf material | 5 inches | Fibrous roots, ½-3 mm diameter, 5 inches long, beige to light brown | Dark brown sandy silt, some gravel |
| TR3-3 | Intermediate wheatgrass | 5, 5 | 6 inches | 0.5 inch aboveground | All leaf material | 5 inches | Fibrous roots, ½-1 mm diameter, 4 inches long, beige to brown | Brown sandy silt, some gravel |
| Grasses - Cover 2 | | | | | | | | |
| TR1-1 | No grass sample | -- | -- | -- | -- | -- | -- | -- |
| TR1-2 | Indian ricegrass | 12, 7 | 3 inches | 0.5 inch aboveground | All leaf material, leaves short because sampled early in season | 4 inches | Fibrous roots, ½-1.5 mm diameter, 4 inches long, tan | Reddish brown clayey silt, some cobble |
| TR1-3 | No grass sample | -- | -- | -- | -- | -- | -- | -- |
| TR2-1 | Intermediate wheatgrass | 5, 5 | 4 inches | 0.5 inch aboveground | All leaf material, minor amount of yellow attenuate tips | 5 inches | Fibrous roots, ½-2 mm diameter, 5 inches long, tan to white, rhizomes | Brown clayey silt, some cobble |
| TR2-2 | Intermediate wheatgrass | 5, 5 | 6 inches | 0.5 inch aboveground | All leaf material, 5% of leaves have yellow attenuate tips, one plant half eaten by elk | 6 inches | Fibrous roots, ¼-2 mm diameter, 5 inches long, rhizomes in sample | Reddish brown clayey silt, some gravel and cobble |
| TR2-3 | Intermediate wheatgrass | 5, 5 | 5 inches | 0.5 inch aboveground | All leaf material, minor amount of yellow attenuate tips, extending into intermediate sections of leaves | 4-6 inches | Fibrous roots, ¼-2 mm diameter, 4 inches long, tan, fine sediment attached to roots before washing | Reddish brown clayey silt, some gravel and cobble |
| TR3-1 | Intermediate wheatgrass | 5, 5 | 5 inches | 0.5 inch aboveground | All leaf material, minor amount of insect herbivory | 4-5 inches | Fibrous roots, ½-1 mm diameter, 4 inches long, white to tan, some roots extend into tailing | Brown sandy silt, some gravel |
| TR3-2 | Intermediate wheatgrass | 5, 5 | 5-10 inches | 0.5 inch aboveground | All leaf material, minor amount of insect herbivory | 6 inches | Fibrous roots, ¼-2 mm diameter, 6 inches long, tan, old rhizomes in sample | Brown sandy silt, some gravel |
| TR3-3 | Intermediate wheatgrass | 5, 5 | 4-6 inches | 0.5 inch aboveground | All leaf material | 4.5 inches | Fibrous roots, ¼-2 mm diameter, 4 inches long, tan | Brown sandy silt, some gravel |

Table 4
DESCRIPTION OF VEGETATION AND ROOT ZONE SOIL SAMPLES
CMI Questa Mine
Soil and Vegetation Sampling Event
April/May 2010

| Sample Location | Species | Number of Individuals Sampled (Above ground, Root) | Aboveground Sample | | | Belowground Sample | | |
|------------------|--------------------|--|----------------------------------|---------------------------|---|--------------------------------|--|---------------------------------------|
| | | | Average Height of Sampled Plants | Sampling/ Clipping Height | Description | Average Observed Rooting Depth | Description | Root Zone Soil Description |
| TR2-1 | No shrub sample | -- | -- | -- | -- | -- | -- | -- |
| TR2-2 | No shrub sample | -- | -- | -- | -- | -- | -- | -- |
| TR2-3 | No shrub sample | -- | -- | -- | -- | -- | -- | -- |
| TR3-1 | No shrub sample | -- | -- | -- | -- | -- | -- | -- |
| TR3-2 | Rubber rabbitbrush | 4, 4 | 12-24 inches | 6-24 inches above ground | Green stems with young green leaves about 0.5 inches long, clipped stems 4-6 inches long, moderate amount of insect galls, evidence of browsing | 12 inches | Lateral roots, 1-10 mm diameter, tan, 12-18 inches long | Light gray sandy silt, some gravel |
| TR3-3 | No shrub sample | -- | -- | -- | -- | -- | -- | -- |
| Shrubs – Cover 3 | | | | | | | | |
| TR1-1 | Rubber rabbitbrush | 5, 5 | 10 inches | 6 inches above ground | Green stems and young green leaves, small but relatively vigorous plants, clipped stems to 8 inches long. | 10 inches | Taproot and lateral roots, ½ to 10 mm diameter, clipped pieces up to 10 inches length, tan | Brown clayey silt, some gravel |
| TR1-2 | Rubber rabbitbrush | 5, 5 | 12 inches | 6 inches above ground | Green stems and young green leaves, moderately vigorous plants | 10 inches | Taproot and lateral roots, ½ - 10 mm diameter, tan-white, clipped pieces up to 10 inches long | Brown sandy silt, few gravel |
| TR1-3 | Rubber rabbitbrush | 5, 5 | 10 inches | 6 inches above ground | Green stems and young green leaves, some browsing, insect galls, moderately vigorous plants | 10 inches | Taproot and lateral roots, ½ -10 mm diameter, clipped pieces 10 inches long, tan | Reddish brown clayey silt, few gravel |
| TR2-1 | Rubber rabbitbrush | 5, 5 | 12-18 inches | 6-12 inches above ground | Green stems with young green leaves, vigorous growth, clipped pieces 6-9 inches long, healthy | 8-10 inches | Taproot and majority lateral roots, 1-5 mm diameter, clipped pieces 4-5 inches long, tan | Light reddish brown clayey silt |
| TR2-2 | No shrub sample | -- | -- | -- | -- | -- | -- | -- |
| TR2-3 | Rubber rabbitbrush | 6, 6 | 2-18 inches | 2-18 inches above ground | Green stems with young green leaves, one plant had galls | 9 inches | Taproot and lateral roots, ½ - 10 mm diameter, clipped pieces up to 8 inches long, tan | Brown silty clay, some gravel |
| TR3-1 | Rubber rabbitbrush | 5, 5 | 24-30 inches | Not recorded | Green stems and young green leaves, clipped pieces 4-6 inches long | 12 inches | Lateral roots, ½ - 3 mm diameter, clipped pieces up to 6 inches long, beige - white | Brown sandy silt, some gravel |
| TR3-2 | Rubber rabbitbrush | 8, 5 | 24-30 inches | 8-18 inches above ground | Green stems with young green leaves | 12 inches | Taproot and lateral roots, ½ - 10 mm diameter, clipped pieces up to 8 inches long, extend into tailing | Brown sandy silt, some gravel |
| TR3-3 | Rubber rabbitbrush | 6, 5 | 8 -24 inches | 2-24 inches above ground | Green stems and young green leaves. Smaller plants had little green growth, appear to be growing poorly | 10 inches | Taproot and lateral roots, ½- 10 mm diameter, clipped pieces up to 9 inches long, roots growing into tailing | Brown sandy silt, some gravel |

Note:
-- denotes that the plant species was not available.

Notes:

* In vitro bio-accessibility (IVBA) is calculated by dividing the extractable Mo concentration in mg/L by the total Mo concentration in soil in mg/kg. The extractable Mo concentration was determined to be below the RL. The RL was used to calculate the % IVBA, which provides a conservative value.

- = denotes no sample was collected (plant type not available) or submitted to laboratory for analysis (soil for bio-accessibility analysis).

< = indicates that the analytical result is less than the provided value.

% = percent

J = analytical result is estimated.

mg/kg = milligram per kilogram

mg/L = milligram per liter

Mo = molybdenum

RL = reporting limit

Analytical results are from TestAmerica Burlington (soil, tailing, vegetation) and the University of Colorado (bio-accessibility).

| Texture | N/A | N/A | SCL | SL | LS | LS | N/A | N/A |

Notes:

Laboratory analysis for the above parameters was performed on the sand and fines fraction (less than 2 mm) of the original sample.

- = sample was not analyzed for this parameter

% = percent

KCL = potassium chloride

LS = loamy sand

meq/L = milli equivalent per liter

mg/kg = milligram per kilogram

mm = millimeter

mmhos/cm = milli mhos per centimeter

N/A = not applicable

s.u. = standard unit

SCL = sandy clay loam

SL = sandy loam

¹ Analyses performed by Energy Laboratories, Helena, Montana.

² Analysis performed by TestAmerica, Burlington, Vermont.

Notes:

TestAmerica Burlington conducted particle size analysis in accordance with ASTM Method D422 on a 5-gallon bucket of borrow area material for each of the four samples (BA1, BA2, BA3, BA4).

Borrow area material sample locations are shown on Figure 4 of this report.

Plant type: Shrub _____ Grass X Forb _____

Species Intermediate Wheat Grass

Aboveground Sample X Belowground Sample _____

Site ID CVR2TR3-3 Area Tailings Facility

Location ~ 2m frm. center pt.

Description of Sampled Vegetation

Number of Individuals in Sample 5

Phenology: Vegetative X Bud _____ Flowering _____ Fruiting _____ Senescing _____

Notes all leaf material

Average aboveground size of sampled plants 4-6 in.

Description of Aboveground Samples

Sampling/clipping height ~~4-6 in.~~ ^{EB} 1/2 in. frm. bottom

Pathogens (presence, description, prevalence) no

Herbivory (presence, description, prevalence) no

Visible dust no

Other Description _____

SOP NUMBER 6.0

Plant Sample Collection

Description of Belowground Samples

Sampling depth _____

Type of roots: woody _____ rhizomes _____ taproot _____ fibrous _____ other _____

Description of roots (size, color, mycorrhizae, root nodules) _____

Injury by pathogens or herbivores _____ *NA*

Diameter and length _____

Notes _____

PLANT SAMPLE COLLECTION DATA SHEET

Sample ID CVR1TR3-1-T03N-PLTFAW Date 4/27/10 1500
Personnel Soellner, Dawson, Best, Gulde, Koch
Plant type: Shrub _____ Grass _____ Forb X
Species alfalfa
Aboveground Sample X Belowground Sample _____
Site ID CVR1TR3-1 Area Tailings Facility
Location w/in ~ 2m W of middle pt.

Description of Sampled Vegetation

Number of Individuals in Sample 1 ^{MTS} 3
Phenology: Vegetative X Bud _____ Flowering _____ Fruiting _____ Senescing _____
Notes leaves + green stems

Average aboveground size of sampled plants 1m tall, stems are 2-4m long

Description of Aboveground Samples

Sampling/clipping height ground-level
Pathogens (presence, description, prevalence) no

Herbivory (presence, description, prevalence) yes (insects)

Visible dust no

Other Description _____

Description of Belowground Samples

Sampling depth _____

Type of roots: woody _____ rhizomes _____ taproot _____ fibrous _____ other _____

SOP NUMBER 6.0

Plant Sample Collection

Description of roots (size, color, mycorrhizae, root nodules) _____

PLANT SAMPLE COLLECTION DATA SHEET

Sample ID CVR3TR2-3-T04N-PLTSBW Date 04/29/10 13:30
Personnel Dawson, Gulde, Koch
Plant type: Shrub X Grass _____ Forb _____
Species Rubber Rabbit Brush
Aboveground Sample _____ Belowground Sample X
Site ID CVR3TR2-3 Area Tailings Facility
Location ~2m frm. center pt.

Description of Sampled Vegetation

Number of Individuals in Sample 6
Phenology: Vegetative X Bud _____ Flowering _____ Fruiting _____ Senescing _____
Notes stems + young-green leaves

Average aboveground size of sampled plants 2in. - 18in.

Description of Aboveground Samples

Sampling/clipping height _____
Pathogens (presence, description, prevalence) _____
Herbivory (presence, description, prevalence) _____
Visible dust _____
Other Description _____

Description of Belowground Samples

Sampling depth 9in.
Type of roots: woody _____ rhizomes _____ taproot X fibrous _____ other X
lateral

SOP NUMBER 6.0

Plant Sample Collection

Description of roots (size, color, mycorrhizae, root nodules) ^{no} ^{no} ^{mm MTS} 1/2 cm - 10 cm, tan

Injury by pathogens or herbivores no

Diameter and length 1/2 cm - 10 cm ; 8 in.

PLANT SAMPLE COLLECTION DATA SHEET

Sample ID CVR3TR3-1-T04N-PLTSBW Date 04/29/10 0840
Personnel Dawson, Gulde, Koch
Plant type: Shrub X Grass _____ Forb _____
Species Rubber Rabbit Brush
Aboveground Sample _____ Belowground Sample X
Site ID CVR3TR3-1 Area Tailings Facility
Location ~2m frm. center pt.

Description of Sampled Vegetation

Number of Individuals in Sample 5
Phenology: Vegetative X Bud _____ Flowering _____ Fruiting _____ Senescing _____
Notes stems + beginner leaves

Average aboveground size of sampled plants 2-2 1/2 ft.

Description of Aboveground Samples

Sampling/clipping height _____

Pathogens (presence, description, prevalence) _____

Herbivory (presence, description, prevalence) NA

Visible dust _____

Other Description _____

Description of Belowground Samples

Sampling depth 1 ft.

Type of roots: woody _____ rhizomes _____ taproot _____ fibrous _____ other X lateral

SOP NUMBER 6.0

Plant Sample Collection

Description of roots (size, color, mycorrhizae, root nodules) ^{no} ^{no} 1/2 mm - 3 mm, 6 in, beige-white

Injury by pathogens or herbivores no

Diameter and length 1/2 mm - 3 mm, ~6 in.

CMI Soil and Vegetation Sampling Event

This report contains the final results of the data review conducted for the samples collected in April and May 2010 from the tailings facility at the Questa Mine. Samples were sent to TestAmerica (TA) of South Burlington, Vermont for total molybdenum analysis. Four borrow area samples were subcontracted to Energy Laboratories (Energy) of Billings, Montana for soil characterization analyses. TA and Energy conducted the analyses and reported the results in accordance with the requirements of the Chevron Mining, Inc. Questa Mine Sampling Quality Assurance Project Plan Revision 0.0 (QAPP) (URS, April 23, 2010). The data review was conducted in accordance with the Chevron Mining, Inc. Questa Mine Sampling QAPP and evaluation of laboratory criteria, as applicable.

The samples were reported in fifteen data packages (B10051307, 137254, 137214, 137213, 137210, 137208, 137205, 137201, 137171, 137170, 137169, 137168, 137166, 137164, and 137161) and the individual narratives can be found in Section III. All data packages were reviewed for the following parameters: receipt issues, method blanks, continuing calibration blanks, laboratory equipment blanks, and rinsate blanks, holding time, laboratory control sample (LCS) recoveries, matrix spike (MS) recoveries, method duplicate samples, serial dilution results, post-digestion spike recoveries, field duplicate results, internal standard results, surrogate recoveries, initial and continuing calibration, and any issues identified in the laboratory case narrative, as applicable to the method. Full validation (including transcription errors checking, recalculating results, and verifying the calibration) was conducted on two of the fifteen data packages, satisfying the QAPP criterion of 10% of the data packages received per analysis type per sampling event. Note: only the methods that contained raw data were re-calculated (total molybdenum and percent solids).

Section I presents a summary of the quality control (QC) samples collected for this sampling event and any resultant qualification. Section II presents a discussion of precision, accuracy, representativeness, completeness and comparability (PARCC) parameters and sensitivity. And Section III presents the individual data review summaries for the fifteen packages.

Section I – QC Samples

QC samples were collected and analyzed during the sampling event and include samples selected for matrix spike (MS) analysis, field duplicate samples, and rinsate blanks in addition to method-specific QC analyses. An overall assessment for the sampling event data has been conducted. When QC issues accounted for less than 35% of the QC analyses conducted, applicable data qualification was limited to qualification of the parent samples. When QC issues accounted for more than 35% of the QC analyses conducted, applicable data qualification was extended to qualification of all samples.

Matrix Spike

Matrix spike analyses were performed on the samples listed in the table below.

| Sample | Analyses |
|--------------|---|
| Borrow Area | |
| BA1-T01N-SOL | Chemical Characteristics |
| BA2-T01N-SOL | Saturated Paste, Ammonia Oxalate Extractable Metals, Ammonium Acetate Extractable Metals, DTPA Extractable Metals |
| BA4-T01N-SOL | Total Molybdenum |

| Sample | Analyses |
|-------------------------------|------------------|
| Soil/ Tailing from Solar Area | |
| CVR2TR1-1-T04N-SOL | Total Molybdenum |
| CVR3TR3-1-T01N-TLG | |
| CVR3TR1-1-T02N-SOL | |
| CVR2TR1-1-T03N-SOL | |
| CVR1TR3-3-T01N-SOL | |
| CVR1TR1-1-T04N-SOL | |
| Plant from Solar Area | |
| CVR3TR1-2-T02N-PLTGBW | Total Molybdenum |
| CVR3TR1-2-T02N-PLTGAW | |
| CVR3TR1-1-T04N-PLTSBW | |
| CVR3TR1-1-T04N-PLTSAW | |
| CVR1TR3-2-T03N-PLTFAW | |
| CVR1TR3-2-T03N-PLTFBW | |
| CVR1TR1-1-T02N-PLTGAW | |
| CVR1TR1-1-T02N-PLTGBW | |

This number of MS/MSD samples met the required QAPP frequency of 1 set per 20 samples.

As applicable, qualifiers have been applied to the parent samples when the recoveries were outside the laboratory historical limits. In addition, the site-specific MS and MSD results were assessed collectively to evaluate potentially systematic matrix effects and to determine the need for qualification of associated sample results of similar matrix.

The table below presents the analytes where >35% of the MS percent recoveries were outside limits and qualifications have been applied to associated samples. The details of each MS analyses and qualification to parent samples are provided in each individual data review summary.

| Analyte | # of MS Below Control Limits | # of MS Above Control Limits | Total # of MS/MSD | % MS/MSD Outside of Control Limits | Qualification |
|---|---------------------------------------|---------------------------------------|----------------------|---|---|
| Soil/ Tailing from Solar Area (CVR1, CVR2, CVR3 IDs) | | | | | |
| Metals | | | | | |
| Total Molybdenum | 3 | 0 | 6 | 50% | All the soil and tailing total molybdenum results from the solar area were qualified as estimated (U/J MS-L) to reflect the potential low bias. |

= Number MS = Matrix Spike % = Percentage J/UJ = Estimated L – Low Bias

Field Duplicates

The following field duplicate pairs were collected in association with this sampling event:

| Field Duplicate | Analyses |
|-------------------------------|------------------|
| Soil/ Tailing from Solar Area | |
| CVR3TR1-1-T04D-SOL | Total Molybdenum |
| CVR2TR-2-T02D-SOL | |
| CVR2TR2-2-T03D-SOL | |
| CVR1TR3-1-T02D-SOL | |
| CVR1TR1-1-T01D-SOL | |
| CVR1TR1-1-T01D-TLG | |
| CVR1TR2-1-T01D-SOL | |
| CVR1TR2-1-T01D-TLG | |
| Plant from Solar Area | |
| CVR2TR2-2-T03D-PLTFAW | Total Molybdenum |
| CVR2TR2-2-T03D-PLTFBW | |
| CVR3TR3-2-T04D-PLTSAW | |
| CVR3TR3-2-T04D-PLTSBW | |
| CVR2TR1-2-T03D-PLTFAW | |
| CVR2TR1-2-T03D-PLTFBW | |
| CVR1TR3-2-T02D-PLTGAW | |
| CVR1TR3-2-T02D-PLTGBW | |
| CVR1TR2-3-T02D-PLTGAW | |
| CVR1TR2-3-T02D-PLTGBW | |

With the exceptions summarized in the table below, applicable evaluation criteria were satisfied for the seven field duplicate pairs.

| Analyte | Sample Result (mg/Kg) | FD Result (mg/Kg) | RPD ($\pm 50\%$) | Absolute Difference (4X Greater RL) | Total # of FDs | % FDs Outside of Control Limits | Qualification |
|---|-----------------------|-------------------|--------------------|-------------------------------------|----------------|---------------------------------|---|
| Metals - Soil/ Tailing from Solar Area | | | | | | | |
| CVR1TR1-1-T01N-SOL/ CVR1TR1-1-T01D-SOL | | | | | | | |
| Molybdenum | 41.3 | 23.0 | 56 | --- | 8 | 13% | As <35% of the field duplicate results were outside of acceptance limits, data qualification was only extended to the parent samples. The total molybdenum results for the field duplicate pair were qualified as estimated (UJ/J). |

Mg/Kg – Milligrams per Kilogram
UJ/J – Estimated

FD – Field Duplicate

RPD – Relative Percent Difference

RL – Reporting Limit

This number of field duplicates samples met the QAPP frequency of 1 per 20 samples.

Rinsate Blanks

The soil and vegetation samples for this sampling event were not collected with dedicated equipment. Thus, twelve rinsate blanks were collected in association with the soil and vegetation samples. This number of rinsate blanks met the QAPP frequency of 1 per 20 samples per matrix. After accounting for blank contamination, target analytes were not detected in the rinsate blanks.

Section II – PARCC Parameters + Sensitivity

The section below presents precision, accuracy, representativeness, completeness, comparability (i.e., PARCC parameters), and sensitivity with respect to the samples collected for the CMI Soil and Vegetation sampling event.

Precision

Precision is defined as the agreement between a set of replicate measurements without assumption or knowledge of the true value. Precision of laboratory measurements was evaluated by the comparison of method duplicate results and FD results.

The relative percent differences (RPDs) between: 1) 100% of the RPDs between the site-specific method duplicates and 2) >99% of the field duplicate results satisfied the applicable evaluation criterion; indicating acceptable precision was attained with respect to the analytical method and sample matrix.

Accuracy

Approximately 100% of the LCS recoveries and approximately 95% of the site-specific MS recoveries were within the laboratory historical limits indicating acceptable accuracy was attained with respect to the analytical method and sample matrix. Results were not qualified as unusable due to MS recovery failures.

Representativeness

Representativeness is the degree to which data accurately and precisely represent a characteristic of a population, parameter variations at a sampling point, or an environmental condition. Representativeness was maintained during the sampling effort by completing all sampling using similar sampling procedures.

Completeness

Completeness is defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for analysis.

Results were not qualified as unusable. The completeness for this program is 100%, satisfying the requirement of 95%.

Comparability

Comparability expresses the confidence with which one data set can be compared to another. Comparability can be related to accuracy and precision because these quantities are measures of data reliability. Data are comparable if collection techniques, measurement procedures, method and reporting are equivalent for the samples within a sample set. To maximize comparability, all samples covered by this report were collected and analyzed in accordance with the QAPP.

As acceptable levels of overall accuracy and precision were attained, the reporting and analyses of the data within these data packages are considered comparable to one another.

Sensitivity

Reporting limits (RLs) are established by the analytical laboratory based on the method detection limits (MDLs) and project RL requirements. The laboratories reported positive results between the MDL and the RL. No results were reported between the MDL and RL. Further action was not necessary.

CMI SOIL AND VEGETATION SAMPLING DATA REVIEW SUMMARY

Sample Delivery Groups: 137161

Sampling Date: April and May 2010

Data Reviewer: Liz Best

Date Completed: June 8th, 2010

Peer Reviewer: Sheri O'Connor

Date Completed: June 16th, 2010

This report contains the final results of the data review conducted for the samples collected in April and May 2010 from the tailings facility at the Questa Mine. Samples were sent to TestAmerica (TA) of South Burlington, Vermont for total molybdenum analysis. Four borrow area samples were subcontracted to Energy Laboratories (Energy) of Billings, Montana for soil characterization analyses. TA and Energy conducted the analyses and reported the results in accordance with the requirements of the Chevron Mining, Inc. Questa Mine Sampling Quality Assurance Project Plan Revision 0.0 (QAPP) (URS, April 23, 2010). The data review was conducted in accordance with the Chevron Mining, Inc. Questa Mine Sampling QAPP and evaluation of laboratory criteria, as applicable. The table below summarizes the samples and analyses presented in this data package.

| Field ID | Sample Type | Laboratory ID | Matrix | Analyses |
|--------------------|-------------|---------------|--------|--------------------------|
| | | | | Total Molybdenum (6010B) |
| CVR1TR1-1-T01N-SOL | SA | 828744 | S | X ^M |
| CVR1TR1-1-T01N-TLG | SA | 828745 | S | X |
| CVR1TR1-1-T02N-SOL | SA | 828746 | S | X |
| CVR1TR1-2-T01N-SOL | SA | 828747 | S | X |
| CVR1TR1-2-T01N-TLG | SA | 828748 | S | X |
| CVR1TR1-2-T02N-SOL | SA | 828749 | S | X |
| CVR1TR1-3-T01N-SOL | SA | 828750 | S | X |
| CVR1TR1-3-T01N-TLG | SA | 828751 | S | X |
| CVR1TR1-3-T02N-SOL | SA | 828752 | S | X |

General Overall Assessment:

| | |
|---|---|
| | Data are usable without qualification. |
| X | Data are usable with qualification (noted below). |
| | Some or all data are unusable for any purpose (detailed below). |

Case Narrative Comments: All case narrative comments concerning data qualification are noted in the table below.

| Review Parameter | Criteria Met? | Comments |
|--|---------------|--|
| Chain of Custody (COC) & Sample Receipt | Yes | All samples were received intact and under COC. The temperature of the coolers upon receipt were within the $\leq 6^{\circ}\text{C}$ temperature criterion. |
| Holding Times | Yes | All samples were extracted and analyzed within the applicable holding time criteria specified in the QAPP. Data qualification was not required. |
| Laboratory Blanks <ul style="list-style-type: none"> Method Blanks (MB) Initial and Continuing Calibration Blanks (ICB, CCB) | No | With the exceptions listed below in Table 1, all blanks were reported as non-detect for the target compounds. |
| Laboratory Performance <ul style="list-style-type: none"> Initial and Continuing Calibration Verifications (ICV/ CCV) | Yes | ICV and CCV analyses were conducted at the proper frequency specified in the QAPP. All target analytes were recovered within the applicable QAPP acceptance ranges. |
| Laboratory Performance <ul style="list-style-type: none"> Laboratory Control Samples (LCS) | Yes | One LCS per method per analytical batch was prepared and analyzed. All of the LCS percent recoveries and RPDs were within the acceptance limits. Data qualification was not necessary. |
| Internal Standard Areas | Yes | All internal standard areas were within the acceptance limits. |
| Matrix Quality Control <ul style="list-style-type: none"> Matrix Spike (MS) CVR1TR1-1-T01N-SOL (Total Molybdenum) Method Duplicate (MD) | No | With the exception summarized below in Table 2, the MS percent recovery was within the laboratory acceptance limits. When MS issues accounted for less than 35% of the MS analyses conducted, |

| Review Parameter | Criteria Met? | Comments |
|--|---------------|--|
| CVR1TR1-1-T01N-SOL (Percent Solids, Total Molybdenum) | | <p>applicable data qualification was limited to qualification of the parent sample. When >35% of the MS results did not met criteria, evaluation was extended to all associated samples as presented in Section I.</p> <p>The laboratory duplicates met the evaluation criteria. Data qualification was not necessary.</p> |
| Post Digestion Spikes (PDS) CVR1TR1-1-T01N-SOL (Total Molybdenum) | Yes | A post-digestion spike was conducted on sample CVR1TR1-1-T01N-SOL for the 6010B analysis. The total molybdenum recovery for the PDS was within the laboratory determined acceptance range. |
| Serial Dilution (SD) CVR1TR1-1-T01N-SOL (Total Molybdenum) | Yes | A serial dilution analysis was conducted on sample CVR1TR1-1-T01N-SOL for the 6010B analysis. Only the results that were greater than 50 times their respective MDLs were appropriate for comparing to the evaluation criterion. The total molybdenum percent difference (%D) between the original sample result and the result obtained from the sample-diluted 1:5 was $\leq 10\%$. |
| Interference Check Standard (ICS) | Yes | <p>All ICS A and ICS B solution percent recoveries were within the acceptance limits of 80-120%. Therefore, data qualification based on ICS A and ICS B percent recoveries was not necessary.</p> <p>The interferent element iron was present in some of the soil samples in this data package at concentrations greater than or equal to that in the ICSs. As such, these samples were evaluated for positive and negative biases suggested by the ICS A. Data qualification was issued if the absolute value of the ICS A result was greater than the MDL and it suggested a positive or negative bias which accounted for more than 25% of associated sample results or reporting limits. (Note: The ICS A solution only contains the interferent elements [Al, Ca, Mg, and Fe] so any positive or negative result for other analytes is inferred to be a bias potentially caused by one or more of the interferent elements present.) As the total molybdenum ICSA results did not account for more than 25% of the sample total molybdenum results, data qualification was not necessary.</p> |
| Field Quality Control <ul style="list-style-type: none"> • Trip Blank (TB) None • Field Duplicate (FD) CVR1TR1-1-T01D-SOL CVR1TR1-1-T01D-TLG CVR1TR2-1-T01D-SOL CVR1TR2-1-T01D-TLG • Rinsate/ Field Blanks (RB, FBs) RB01-T02N-PLTGAW RB02-T02N-PLTGBW RB03-T02N-SOL RB04-T02N-SOL RB05-T02N-SOL RB06-T02N-PLTGAW RB07-T02N-PLTGBW RB08-T02N-SOL RB09-T03N-PLTFW RB10-T03N-PLTFBW RB11-T03N-SOL RB12-T02N-SOL | Yes | <p>A trip blank was not required for this sampling event.</p> <p>A collective assessment of field duplicates is discussed in the overall assessment (Section I).</p> <p>The rinsate blank results are reported in data package 137171. A collective assessment of rinsate blanks is discussed in the overall assessment (Section I).</p> |
| Non-detect results without altered reporting limits (RLs) | Yes | No results were reported as non-detect at elevated reporting limits. |
| Package Completeness | Yes | All results are considered usable as qualified. |

Table 1: Method Blank Outliers and Resultant Data Qualification

| Analyte | MB or CCB | Concentration (µg/L) | Qualified Data |
|------------------|-----------|----------------------|--|
| Total Molybdenum | MB | -0.073 | As the absolute value of the method blank concentration was <RL, the sample data were not evaluated for possible total molybdenum blank contamination. |
| | CCB 4 | 1.2 | None. The associated total molybdenum sample results were reported at concentrations >5x the blank contamination. |

MB –Method Blank

CCB – Continuing Calibration Blank

RL – Reporting Limit

µg/L – Micrograms per Liter

Table 2: MS Outliers and Resultant Data Qualification

| Sample | Analyte | MS %R (Limits) | RPD (Limit) | Qualification |
|--------------------|------------------|-------------------------|-------------|--|
| CVR1TR1-1-T01N-SOL | Total Molybdenum | 75.6 (80-120) | --- | As the potential bias was considered to be low, the total molybdenum result for sample CVR1TR1-1-T01N-SOL was qualified as estimated (J MS-L). |

MS – Matrix Spike

%R – Percent Recovery

RPD – Relative Percent Difference

J – Estimated

L- Low Bias

Date Completed: June 16th, 2010

This report contains the final results of the data review conducted for the samples collected in April and May 2010 from the tailings facility at the Questa Mine. Samples were sent to TestAmerica (TA) of South Burlington, Vermont for total molybdenum analysis. Four borrow area samples were subcontracted to Energy Laboratories (Energy) of Billings, Montana for soil characterization analyses. TA and Energy conducted the analyses and reported the results in accordance with the requirements of the Chevron Mining, Inc. Questa Mine Sampling Quality Assurance Project Plan Revision 0.0 (QAPP) (URS, April 23, 2010). The data review was conducted in accordance with the Chevron Mining, Inc. Questa Mine Sampling QAPP and evaluation of laboratory criteria, as applicable. The table below summarizes the samples and analyses presented in this data package.

| Field ID | Sample Type | Laboratory ID | Matrix | Analyses |

General Overall Assessment:

| | |
|---|---|
| | Data are usable without qualification. |
| X | Data are usable with qualification (noted below). |
| | Some or all data are unusable for any purpose (detailed below). |

Case Narrative Comments: All case narrative comments concerning data qualification are noted in the table below.

| Review Parameter | Criteria Met? | Comments |
|--|---------------|--|
| Chain of Custody (COC) & Sample Receipt | Yes | All samples were received intact and under COC. The temperature of the coolers upon receipt were within the $\leq 6^{\circ}\text{C}$ temperature criterion. |
| Holding Times | Yes | All samples were extracted and analyzed within the applicable holding time criteria specified in the QAPP. Data qualification was not required. |
| Laboratory Blanks <ul style="list-style-type: none"> Method Blanks (MB) Initial and Continuing Calibration Blanks (ICB, CCB) | No | With the exceptions listed below in Table 1, all blanks were reported as non-detect for the target compounds. |
| Laboratory Performance <ul style="list-style-type: none"> Initial and Continuing Calibration Verifications (ICV/ CCV) | Yes | ICV and CCV analyses were conducted at the proper frequency specified in the QAPP. All target analytes were recovered within the applicable QAPP acceptance ranges. |
| Laboratory Performance <ul style="list-style-type: none"> Laboratory Control Samples (LCS) | Yes | One LCS per method per analytical batch was prepared and analyzed. All of the LCS percent recoveries and RPDs were within the acceptance limits. Data qualification was not necessary. |
| Internal Standard Areas | Yes | All internal standard areas were within the acceptance limits. |
| Matrix Quality Control <ul style="list-style-type: none"> Matrix Spike (MS) CVR2TR1-1-T03N-SOL (Total Molybdenum) Method Duplicate (MD) | No | With the exception summarized below in Table 2, the MS percent recovery was within the laboratory acceptance limits. When MS issues accounted for less than 35% of the MS analyses conducted, |

| Review Parameter | Criteria Met? | Comments |
|---|---------------|--|
| CVR2TR1-1-T03N-SOL (Percent Solids, Total Molybdenum) | | <p>applicable data qualification was limited to qualification of the parent sample. When >35% of the MS results did not met criteria, evaluation was extended to all associated samples as presented in Section I.</p> <p>The laboratory duplicates met the evaluation criteria. Data qualification was not necessary.</p> |
| Post Digestion Spikes (PDS) CVR2TR1-1-T03N-SOL | Yes | A post-digestion spike was conducted on sample CVR2TR1-1-T03N-SOL for the 6010B analysis. The total molybdenum recovery for the PDS was within the laboratory determined acceptance range. |
| Serial Dilution (SD) CVR2TR1-1-T03N-SOL | Yes | A serial dilution analysis was conducted on sample CVR2TR1-1-T03N-SOL for the 6010B analysis. Only the results that were greater than 50 times their respective MDLs were appropriate for comparing to the evaluation criterion. The total molybdenum percent difference (%D) between the original sample result and the result obtained from the sample-diluted 1:5 was $\leq 10\%$. |
| Interference Check Standard (ICS) | Yes | <p>All ICS A and ICS B solution percent recoveries were within the acceptance limits of 80-120%. Therefore, data qualification based on ICS A and ICS B percent recoveries was not necessary.</p> <p>The interferent element iron was present in some of the soil samples in this data package at concentrations greater than or equal to that in the ICSs. As such, these samples were evaluated for positive and negative biases suggested by the ICS A. Data qualification was issued if the absolute value of the ICS A result was greater than the MDL and it suggested a positive or negative bias which accounted for more than 25% of associated sample results or reporting limits. (Note: The ICS A solution only contains the interferent elements [Al, Ca, Mg, and Fe] so any positive or negative result for other analytes is inferred to be a bias potentially caused by one or more of the interferent elements present.) As the total molybdenum ICSA results did not account for more than 25% of the sample total molybdenum results, data qualification was not necessary.</p> |
| Field Quality Control <ul style="list-style-type: none"> • Trip Blank (TB) None • Field Duplicate (FD) CVR2TR2-2-T02D-SOL CVR2TR2-2-T03D-SOL • Rinsate/ Field Blanks (RB, FBs) RB01-T02N-PLTGAW RB02-T02N-PLTGBW RB03-T02N-SOL RB04-T02N-SOL RB05-T02N-SOL RB06-T02N-PLTGAW RB07-T02N-PLTGBW RB08-T02N-SOL RB09-T03N-PLTFAW RB10-T03N-PLTFBW RB11-T03N-SOL RB12-T02N-SOL | Yes | <p>A trip blank was not required for this sampling event.</p> <p>A collective assessment of field duplicates is discussed in the overall assessment (Section I).</p> <p>The rinsate blank results are reported in data package 137171. A collective assessment of rinsate blanks is discussed in the overall assessment (Section I).</p> |

Date Completed: June 16th, 2010

This report contains the final results of the data review conducted for the samples collected in April and May 2010 from the tailings facility at the Questa Mine. Samples were sent to TestAmerica (TA) of South Burlington, Vermont for total molybdenum analysis. Four borrow area samples were subcontracted to Energy Laboratories (Energy) of Billings, Montana for soil characterization analyses. TA and Energy conducted the analyses and reported the results in accordance with the requirements of the Chevron Mining, Inc. Questa Mine Sampling Quality Assurance Project Plan Revision 0.0 (QAPP) (URS, April 23, 2010). The data review was conducted in accordance with the Chevron Mining, Inc. Questa Mine Sampling QAPP and evaluation of laboratory criteria, as applicable. The table below summarizes the samples and analyses presented in this data package.

| Field ID | Sample Type | Laboratory ID | Matrix | Analyses |
|--------------------|-------------|---------------|--------|--------------------------|
| | | | | Total Molybdenum (6010B) |
| CVR2TR1-1-T04N-SOL | SA | 828897 | S | X ^M |
| CVR2TR3-2-T01N-SOL | SA | 828898 | S | X |
| CVR2TR3-2-T01N-TLG | SA | 828899 | S | X |
| CVR2TR3-2-T02N-SOL | SA | 828900 | S | X |
| CVR2TR3-2-T04N-SOL | SA | 828901 | S | X |
| CVR2TR3-3-T01N-SOL | SA | 828902 | S | X |
| CVR2TR3-3-T01N-TLG | SA | 828903 | S | X |
| CVR2TR3-3-T02N-SOL | SA | 828904 | S | X |
| BA5-T01N-SOL | SA | 828905 | S | X |
| BA6-T01N-SOL | SA | 828906 | S | X |
| CVR3TR3-3-T04N-SOL | SA | 828907 | S | X |

Sample Type: SA = Sample X^M = Matrix spike and/or matrix spike duplicate.

Matrix: S = Solid

--- = Not analyzed for this parameter

¹ The laboratory inadvertently logged this sample in as sample CVR3TR2-3-T01N-SOL. To reflect the proper nomenclature the database and data sheets have been correct to read CVR3TR2-3-T01N-TLG.

General Overall Assessment:

| | |
|---|---|
| X | Data are usable without qualification. |
| | Data are usable with qualification (noted below). |
| | Some or all data are unusable for any purpose (detailed below). |

Case Narrative Comments: All case narrative comments concerning data qualification are noted in the table below.

| Review Parameter | Criteria Met? | Comments |
|---|---------------|---|
| Chain of Custody (COC) & Sample Receipt | Yes | All samples were received intact and under COC. The temperature of the coolers upon receipt were within the $\leq 6^{\circ}\text{C}$ temperature criterion. |
| Holding Times | Yes | All samples were extracted and analyzed within the applicable holding time criteria specified in the QAPP. Data qualification was not required. |
| Laboratory Blanks <ul style="list-style-type: none"> Method Blanks (MB) Initial and Continuing Calibration Blanks (ICB, CCB) | No | With the exception listed below in Table 1, all blanks were reported as non-detect for the target compounds. |
| Laboratory Performance <ul style="list-style-type: none"> Initial and Continuing Calibration Verifications (ICV/CCV) | Yes | ICV and CCV analyses were conducted at the proper frequency specified in the QAPP. All target analytes were recovered within the applicable QAPP acceptance ranges. |
| Laboratory Performance <ul style="list-style-type: none"> Laboratory Control Samples (LCS) | Yes | One LCS per method per analytical batch was prepared and analyzed. All of the LCS percent recoveries and RPDs were within the acceptance limits. Data qualification was not necessary. |
| Internal Standard Areas | Yes | All internal standard areas were within the acceptance limits. |
| Matrix Quality Control <ul style="list-style-type: none"> Matrix Spike (MS) CVR2TR1-1-T04N-SOL (Total Molybdenum) Method Duplicate (MD) CVR2TR1-1-T04N-SOL (Percent Solids, Total Molybdenum) | Yes | <p>The MS percent recovery was within the laboratory acceptance limits. Data qualification was not necessary.</p> <p>When MS issues accounted for less than 35% of the MS analyses conducted, applicable data qualification was limited to qualification of the parent sample. When $>35\%$ of the MS results did not meet criteria, evaluation was extended to all associated samples as presented in Section I.</p> <p>The laboratory duplicates met the evaluation criteria. Data qualification was not necessary.</p> |
| Post Digestion Spikes (PDS) CVR2TR1-1-T04N-SOL | Yes | A post-digestion spike was conducted on sample CVR2TR1-1-T04N-SOL for the 6010B analysis. The total molybdenum recovery for the PDS was within the laboratory determined acceptance range. |
| Serial Dilution (SD) CVR2TR1-1-T04N-SOL | Yes | A serial dilution analysis was conducted on sample CVR2TR1-1-T04N-SOL for the 6010B analysis. Only the results that were greater than 50 times their respective MDLs were appropriate for comparing to the evaluation criterion. The total molybdenum percent difference (%D) between the original sample result and the result obtained from the sample-diluted 1:5 was $\leq 10\%$. |
| Interference Check Standard (ICS) | Yes | <p>All ICS A and ICS B solution percent recoveries were within the acceptance limits of 80-120%. Therefore, data qualification based on ICS A and ICS B percent recoveries was not necessary.</p> <p>The interferent element iron was present in some of the soil samples in this data package at concentrations greater than or equal to that in the ICSs. As such, these samples were evaluated for positive and negative biases suggested</p> |

| Review Parameter | Criteria Met? | Comments |
|--|---------------|---|
| | | by the ICS A. Data qualification was issued if the absolute value of the ICS A result was greater than the MDL and it suggested a positive or negative bias which accounted for more than 25% of associated sample results or reporting limits. (Note: The ICS A solution only contains the interferent elements [Al, Ca, Mg, and Fe] so any positive or negative result for other analytes is inferred to be a bias potentially caused by one or more of the interferent elements present.) As the total molybdenum ICSA results did not account for more than 25% of the sample total molybdenum results, data qualification was not necessary. |
| Field Quality Control <ul style="list-style-type: none"> • Trip Blank (TB) None • Field Duplicate (FD) None • Rinsate/ Field Blanks (RB, FBs) RB01-T02N-PLTGAW RB02-T02N-PLTGBW RB03-T02N-SOL RB04-T02N-SOL RB05-T02N-SOL RB06-T02N-PLTGAW RB07-T02N-PLTGBW RB08-T02N-SOL RB09-T03N-PLTFAW RB10-T03N-PLTGBW RB11-T03N-SOL RB12-T02N-SOL | Yes | A trip blank was not required for this sampling event. A collective assessment of field duplicates is discussed in the overall assessment (Section I). The rinsate blank results are reported in data package 137171. A collective assessment of rinsate blanks is discussed in the overall assessment (Section I). |
| Non-detect results without altered reporting limits (RLs) | Yes | No results were reported as non-detect at elevated reporting limits. |
| Package Completeness | Yes | All results are considered usable as qualified. |

| Analyte | MB or CCB | Concentration (µg/L) | Qualified Data |
|------------------|-----------|----------------------|---|
| Total Molybdenum | CCB 2 | 1.5 | None. The associated total molybdenum sample results were reported at concentrations >5x the blank contamination. |

MB –Method Blank

CCB – Continuing Calibration Blank

RL – Reporting Limit

µg/L – Micrograms per Liter

CMI SOIL AND VEGETATION SAMPLING DATA REVIEW SUMMARY

Sample Delivery Groups: 137171

Sampling Date: April and May 2010

Data Reviewer: Liz Best

Date Completed: June 9th, 2010

Peer Reviewer: Sheri O'Connor

Date Completed: June 16th, 2010

This report contains the final results of the data review conducted for the samples collected in April and May 2010 from the tailings facility at the Questa Mine. Samples were sent to TestAmerica (TA) of South Burlington, Vermont for total molybdenum analysis. Four borrow area samples were subcontracted to Energy Laboratories (Energy) of Billings, Montana for soil characterization analyses. TA and Energy conducted the analyses and reported the results in accordance with the requirements of the Chevron Mining, Inc. Questa Mine Sampling Quality Assurance Project Plan Revision 0.0 (QAPP) (URS, April 23, 2010). The data review was conducted in accordance with the Chevron Mining, Inc. Questa Mine Sampling QAPP and evaluation of laboratory criteria, as applicable. The table below summarizes the samples and analyses presented in this data package.

| Field ID | Sample Type | Laboratory ID | Matrix | Analyses |
|------------------|-------------|---------------|--------|--------------------------|
| | | | | Total Molybdenum (6010B) |
| RB01-T02N-PLTGAW | RB | 828908 | W | X |
| RB02-T02N-PLTGBW | RB | 828909 | W | X |
| RB03-T02N-SOL | RB | 828910 | W | X |
| RB04-T02N-SOL | RB | 828911 | W | X |
| RB05-T02N-SOL | RB | 828912 | W | X |
| RB06-T02N-PLTGAW | RB | 828913 | W | X |
| RB07-T02N-PLTGBW | RB | 828914 | W | X |
| RB08-T02N-SOL | RB | 828915 | W | X |
| RB09-T03N-PLTFAW | RB | 828916 | W | X |
| RB10-T03N-PLTFBW | RB | 828917 | W | X |
| RB11-T03N-SOL | RB | 828918 | W | X |
| RB12-T02N-SOL | RB | 828919 | W | X |

Sample Type: RB = Rinsate Blank

X^M = Matrix spike and/or matrix spike duplicate.

Matrix: W = Water

--- = Not analyzed for this parameter

¹ The laboratory inadvertently logged this sample in as sample CVR3TR2-3-T01N-SOL. To reflect the proper nomenclature the database and data sheets have been correct to read CVR3TR2-3-T01N-TLG.

General Overall Assessment:

| | |
|---|---|
| | Data are usable without qualification. |
| X | Data are usable with qualification (noted below). |
| | Some or all data are unusable for any purpose (detailed below). |

Case Narrative Comments: All case narrative comments concerning data qualification are noted in the table below.

| Review Parameter | Criteria Met? | Comments |
|--|---------------|---|
| Chain of Custody (COC) & Sample Receipt | Yes | All samples were received intact and under COC. The temperature of the coolers upon receipt were within the $\leq 6^{\circ}\text{C}$ temperature criterion. |
| Holding Times | Yes | All samples were extracted and analyzed within the applicable holding time criteria specified in the QAPP. Data qualification was not required. |
| Laboratory Blanks <ul style="list-style-type: none"> Method Blanks (MB) Initial and Continuing Calibration Blanks (ICB, CCB) | No | With the exception listed below in Table 1, all blanks were reported as non-detect for the target compounds. |
| Laboratory Performance <ul style="list-style-type: none"> Initial and Continuing Calibration Verifications (ICV/ CCV) | Yes | ICV and CCV analyses were conducted at the proper frequency specified in the QAPP. All target analytes were recovered within the applicable QAPP acceptance ranges. |
| Laboratory Performance <ul style="list-style-type: none"> Laboratory Control Samples (LCS) | Yes | One LCS per method per analytical batch was prepared and analyzed. All of the LCS percent recoveries and RPDs were within the acceptance limits. Data qualification was not necessary. |
| Internal Standard Areas | Yes | All internal standard areas were within the acceptance limits. |
| Matrix Quality Control <ul style="list-style-type: none"> Matrix Spike (MS) None Method Duplicate (MD) None | N/A | As a sample in this data package was not the selected quality control sample, MS and MD results are not included in this report. When MS issues accounted for less than 35% of the MS analyses conducted, applicable data qualification was limited to qualification of the parent sample. When >35% of the MS results did not meet criteria, evaluation was extended to all associated samples as presented in Section I. |
| Post Digestion Spikes (PDS) None | N/A | A post-digestion spike was not conducted on the samples in this data package. |
| Serial Dilution (SD) RB01-T02N-PLTGAW | Yes | A serial dilution analysis was conducted on sample RB01-T02N-PLTGAW for the 6010B analysis. Only the results that were greater than 50 times their respective MDLs were appropriate for comparing to the evaluation criterion. As the total molybdenum result for sample RB01-T02N-PLTGAW was not greater than 50 times the MDL, further action was not necessary. |
| Interference Check Standard (ICS) | Yes | All ICS A and ICS B solution percent recoveries were within the acceptance limits of 80-120%. Therefore, data qualification based on ICS A and ICS B percent recoveries was not necessary. Interferent elements were not present in the water samples in this data package at concentrations greater than or equal to that in the ICSs. Further action was not necessary. |

CMI SOIL AND VEGETATION SAMPLING DATA REVIEW SUMMARY

Sample Delivery Groups: 137208

Sampling Date: April and May 2010

Data Reviewer: Liz Best

Date Completed: June 10th, 2010

Peer Reviewer: Sheri O'Connor

Date Completed: June 16th, 2010

This report contains the final results of the data review conducted for the samples collected in April and May 2010 from the tailings facility at the Questa Mine. Samples were sent to TestAmerica (TA) of South Burlington, Vermont for total molybdenum analysis. Four borrow area samples were subcontracted to Energy Laboratories (Energy) of Billings, Montana for soil characterization analyses. TA and Energy conducted the analyses and reported the results in accordance with the requirements of the Chevron Mining, Inc. Questa Mine Sampling Quality Assurance Project Plan Revision 0.0 (QAPP) (URS, April 23, 2010). The data review was conducted in accordance with the Chevron Mining, Inc. Questa Mine Sampling QAPP and evaluation of laboratory criteria, as applicable. The table below summarizes the samples and analyses presented in this data package.

| Field ID | Sample Type | Laboratory ID | Matrix | Analyses |
|------------------------------------|-------------|---------------|--------|--------------------------|
| | | | | Total Molybdenum (6010B) |
| CVR3TR1-1-T04N-PLTSAW ¹ | SA | 829265 | P | X ^M |
| CVR3TR2-1-T03N-PLTFAW | SA | 829266 | P | X |

Sample Type: SA = Sample FD – Field Duplicate EB – Equipment Blank

X^M = Matrix spike and/or matrix spike duplicate.

Matrix: P = Plant Tissue

--- = Not analyzed for this parameter

¹ The laboratory inadvertently logged this sample in as sample CVR3TR11T04NPLTSAW. To reflect the proper nomenclature the database and data sheets have been correct to read CVR3TR1-1-T04N-PLTSAW.

General Overall Assessment:

| | |
|---|---|
| X | Data are usable without qualification. |
| | Data are usable with qualification (noted below). |
| | Some or all data are unusable for any purpose (detailed below). |

Case Narrative Comments: All case narrative comments concerning data qualification are noted in the table below.

| Review Parameter | Criteria Met? | Comments |
|---|---------------|--|
| Chain of Custody (COC) & Sample Receipt | Yes | All samples were received intact and under COC. The temperature of the coolers upon receipt were within the $\leq 6^{\circ}\text{C}$ temperature criterion. |
| Holding Times | Yes | All samples were extracted and analyzed within the applicable holding time criteria specified in the QAPP. Data qualification was not required. |
| Laboratory Blanks <ul style="list-style-type: none"> Method Blanks (MB) Initial and Continuing Calibration Blanks (ICB, CCB) Laboratory Equipment Blanks (EBs) EQBLK01 | No | With the exception listed below in Table 1, all blanks were reported as non-detect for the target compounds. The laboratory equipment blank results are used to assess the cleanliness of the laboratory's equipment during the plant tissue homogenization process. The total molybdenum result was reported at a concentration of 0.053 mg/Kg in the laboratory equipment blank. As the associated sample results were reported at concentrations $>5\times$ the blank contamination, data qualification was not necessary. |
| Laboratory Performance <ul style="list-style-type: none"> Initial and Continuing Calibration Verifications (ICV/ CCV) | Yes | ICV and CCV analyses were conducted at the proper frequency specified in the QAPP. All target analytes were recovered within the applicable QAPP acceptance ranges. |

| Review Parameter | Criteria Met? | Comments |
|--|---------------|---|
| Laboratory Performance • Laboratory Control Samples (LCS) | Yes | One LCS per method per analytical batch was prepared and analyzed. All of the LCS percent recoveries and RPDs were within the acceptance limits. Data qualification was not necessary. |
| Internal Standard Areas | Yes | All internal standard areas were within the acceptance limits. |
| Matrix Quality Control • Matrix Spike (MS) CVR3TR1-1-T04N-PLTSAW (Total Molybdenum) • Method Duplicate (MD) CVR3TR1-1-T04N-PLTSAW (Percent Solids, Total Molybdenum) | Yes | The MS percent recovery was within the laboratory acceptance limits. Data qualification was not necessary. When MS issues accounted for less than 35% of the MS analyses conducted, applicable data qualification was limited to qualification of the parent sample. When >35% of the MS results did not meet criteria, evaluation was extended to all associated samples as presented in Section I. All laboratory duplicates met the evaluation criteria. Data qualification was not necessary. |
| Post Digestion Spikes (PDS) CVR3TR1-1-T04N-PLTSAW | Yes | A post-digestion spike was conducted on sample CVR3TR1-1-T04N-PLTSAW for the 6010B analysis. The total molybdenum recovery for the PDS was within the laboratory determined acceptance range. |
| Serial Dilution (SD) CVR3TR1-1-T04N-PLTSAW | Yes | A serial dilution analysis was conducted on sample CVR3TR1-1-T04N-PLTSAW for the 6010B analysis. Only the results that were greater than 50 times their respective MDLs were appropriate for comparing to the evaluation criterion. The total molybdenum percent difference (%D) between the original sample result and the result obtained from the sample-diluted 1:5 was $\leq 10\%$. |
| Interference Check Standard (ICS) | Yes | All ICS A and ICS B solution percent recoveries were within the acceptance limits of 80-120%. Therefore, data qualification based on ICS A and ICS B percent recoveries was not necessary. Interferent elements were not present in the samples in this data package at concentrations greater than or equal to that in the ICSs. Further action was not necessary. |
| Field Quality Control • Trip Blank (TB) None • Field Duplicate (FD) None • Rinsate/ Field Blanks (RB, FBs) None | Yes | A trip blank was not required for this sampling event. A collective assessment of field duplicates is discussed in the overall assessment (Section I). |
| Non-detect results without altered reporting limits (RLs) | Yes | No results were reported as non-detect at elevated reporting limits. |
| Package Completeness | Yes | All results are considered usable as qualified. |

CMI SOIL AND VEGETATION SAMPLING DATA REVIEW SUMMARY

Sample Delivery Groups: 137214

Sampling Date: April and May 2010

Data Reviewer: Liz Best

Date Completed: June 11th, 2010

Peer Reviewer: Sheri O'Connor

Date Completed: June 16th, 2010

This report contains the final results of the data review conducted for the samples collected in April and May 2010 from the tailings facility at the Questa Mine. Samples were sent to TestAmerica (TA) of South Burlington, Vermont for total molybdenum analysis. Four borrow area samples were subcontracted to Energy Laboratories (Energy) of Billings, Montana for soil characterization analyses. TA and Energy conducted the analyses and reported the results in accordance with the requirements of the Chevron Mining, Inc. Questa Mine Sampling Quality Assurance Project Plan Revision 0.0 (QAPP) (URS, April 23, 2010). The data review was conducted in accordance with the Chevron Mining, Inc. Questa Mine Sampling QAPP and evaluation of laboratory criteria, as applicable. The table below summarizes the samples and analyses presented in this data package.

| Field ID | Sample Type | Laboratory ID | Matrix | Analyses |
|------------------------------------|-------------|---------------|--------|--------------------------|
| | | | | Total Molybdenum (6010B) |
| CVR3TR1-2-T02N-PLTGBW ¹ | SA | 829330 | P | X ^M |
| CVR2TR3-3-T02N-PLTGBW | SA | 829331 | P | X |
| CVR3TR3-3-T04N-PLTSAW | SA | 829332 | P | X |
| CVR3TR3-3-T04N-PLTSBW | SA | 829333 | P | X |
| EQBLK01 | EB | 829334 | P | X |

Sample Type: SA = Sample EB – Equipment Blank
X^M = Matrix spike and/or matrix spike duplicate.

Matrix: P = Plant Tissue

--- = Not analyzed for this parameter

¹ The laboratory inadvertently logged this sample in as sample CVR3TR12T02NPLTGBW. To reflect the proper nomenclature the database and data sheets have been correct to read CVR3TR1-2-T02N-PLTGBW.

General Overall Assessment:

| | |
|---|---|
| X | Data are usable without qualification. |

| 828763 | CVR1TR2-3-T01N-SOL | 04/29/10 | SOIL |

Documentation of the condition of the samples at the time of their receipt and any exception to the laboratory's Sample Acceptance Policy is documented in the Sample Handling section of this submittal.

Total Molybdenum by SW-846 6010B Tissue

These sample volumes were homogenized prior to analysis via 6010B. The matrix spike recovery failed low (75.6%) outside the quality control criteria for 6010B (80-120%). Please refer to report for details.

Any reference within this report to Severn Trent Laboratories, Inc. or STL, should be understood to refer to TestAmerica Laboratories, Inc. (formerly known as Severn Trent Laboratories, Inc.) The analytical results associated with the samples presented in this test report were generated under a quality system that adheres to requirements specified in the NELAC standard. Release of the data in this test report and any associated electronic deliverables is authorized by the Laboratory Director's designee as verified by the following signature.

If there are any questions regarding this submittal, please contact me at 802 660-1990.

Sincerely,

A handwritten signature in black ink, appearing to read 'Joseph Carabillo', is written over a light blue horizontal line.

TestAmerica Burlington Data Qualifier Definitions

Organic

- U: Compound analyzed but not detected at a concentration above the reporting limit.
- J: Estimated value.
- N: Indicates presumptive evidence of a compound. This flag is used only for tentatively identified compounds (TICs) where the identification of a compound is based on a mass spectral library search.
- P: SW-846: The relative percent difference for detected concentrations between two GC columns is greater than 40%. Unless otherwise specified the higher of the two values is reported on the Form I.
- CLP SOW: Greater than 25% difference for detected concentrations between two GC columns. Unless otherwise specified the lower of the two values is reported on the Form I.
- C: Pesticide result whose identification has been confirmed by GC/MS.
- B: Analyte is found in the sample and the associated method blank. The flag is used for tentatively identified compounds as well as positively identified compounds.
- E: Compounds whose concentrations exceed the upper limit of the calibration range of the instrument for that specific analysis.
- D: Concentrations identified from analysis of the sample at a secondary dilution.
- A: Tentatively identified compound is a suspected aldol condensation product.
- X,Y,Z: Laboratory defined flags that may be used alone or combined, as needed. If used, the description of the flag is defined in the project narrative.

Inorganic/Metals

- E: Reported value is estimated due to the presence of interference.
- N: Matrix spike sample recovery is not within control limits.
- * Duplicate sample analysis is not within control limits.
- B: The result reported is less than the reporting limit but greater than the instrument detection limit.
- U: Analyte was analyzed for but not detected above the reporting limit.

Calculation: Percent Wet Weight =
$$\frac{\text{Weight of Dry Sample (g)}}{\text{Weight of Wet Sample (g)}} \times 100$$

Where:

Weight of Dry Sample = (Weight of Dish + Dry Sample) (g) - Dish Weight (g)

Weight of Wet Sample = (Weight of Dish + Wet Sample) (g) - Dish Weight (g)

Re: Laboratory Project No. 29000
Case: CMI; SDG: 137164

Dear Mr. O'Conner:

Enclosed are the analytical results for the samples that were received by TestAmerica Burlington on May 4th, 2010. Laboratory identification numbers were assigned, and designated as follows:

| <u>Lab ID</u> | <u>Client Sample ID</u> | <u>Sample Date</u> | <u>Sample Matrix</u> |
|-----------------------------------|-----------------------------|------------------------|--------------------------|
| Received: 05/04/10 ETR No: 137164 | | | |

| 828809 | CVR2TR2-1-T01N-TLG | 04/29/10 | SOIL |

Documentation of the condition of the samples at the time of their receipt and any exception to the laboratory's Sample Acceptance Policy is documented in the Sample Handling section of this submittal.

Total Molybdenum by SW-846 6010B

There were no exceptions to the method quality criteria during the analysis of these samples.

Any reference within this report to Severn Trent Laboratories, Inc. or STL, should be understood to refer to TestAmerica Laboratories, Inc. (formerly known as Severn Trent Laboratories, Inc.) The analytical results associated with the samples presented in this test report were generated under a quality system that adheres to requirements specified in the NELAC standard. Release of the data in this test report and any associated electronic deliverables is authorized by the Laboratory Director's designee as verified by the following signature.

If there are any questions regarding this submittal, please contact me at 802 660-1990.

Sincerely,

A handwritten signature in black ink, appearing to read 'Joseph Carabillo', is written over a light blue horizontal line.

Joseph Carabillo
Project Manager

TestAmerica Burlington Data Qualifier Definitions

Organic

- U: Compound analyzed but not detected at a concentration above the reporting limit.
- J: Estimated value.
- N: Indicates presumptive evidence of a compound. This flag is used only for tentatively identified compounds (TICs) where the identification of a compound is based on a mass spectral library search.
- P: SW-846: The relative percent difference for detected concentrations between two GC columns is greater than 40%. Unless otherwise specified the higher of the two values is reported on the Form I.
- CLP SOW: Greater than 25% difference for detected concentrations between two GC columns. Unless otherwise specified the lower of the two values is reported on the Form I.
- C: Pesticide result whose identification has been confirmed by GC/MS.
- B: Analyte is found in the sample and the associated method blank. The flag is used for tentatively identified compounds as well as positively identified compounds.
- E: Compounds whose concentrations exceed the upper limit of the calibration range of the instrument for that specific analysis.
- D: Concentrations identified from analysis of the sample at a secondary dilution.
- A: Tentatively identified compound is a suspected aldol condensation product.
- X,Y,Z: Laboratory defined flags that may be used alone or combined, as needed. If used, the description of the flag is defined in the project narrative.

Inorganic/Metals

- E: Reported value is estimated due to the presence of interference.
- N: Matrix spike sample recovery is not within control limits.
- * Duplicate sample analysis is not within control limits.
- B: The result reported is less than the reporting limit but greater than the instrument detection limit.
- U: Analyte was analyzed for but not detected above the reporting limit.

Re: Laboratory Project No. 29000
Case: CMI; SDG: 137166

Dear Ms. O'Conner:

Enclosed are the analytical results for the samples that were received by TestAmerica Burlington on May 4th, 2010. Laboratory identification numbers were assigned, and designated as follows:

| <u>Lab ID</u> | <u>Client Sample ID</u> | <u>Sample Date</u> | <u>Sample Matrix</u> |
|-----------------------------------|-----------------------------|------------------------|--------------------------|
| Received: 05/04/10 ETR No: 137166 | | | |
| 828828 | CVR2TR1-1-T01N-SOL | 04/30/10 | SOIL |
| 828829 | CVR2TR1-1-T01N-TLG | 04/30/10 | SOIL |

| 828847 | CVR2TR3-1-T02N-SOL | 04/28/10 | SOIL |

Documentation of the condition of the samples at the time of their receipt and any exception to the laboratory's Sample Acceptance Policy is documented in the Sample Handling section of this submittal.

Total Molybdenum by SW-846 6010B

Molybdenum exhibited a low recovery (56.6%) in the sample spike analysis. The method control limits are set at 80-120% recovery. Please refer to report for details.

Any reference within this report to Severn Trent Laboratories, Inc. or STL, should be understood to refer to TestAmerica Laboratories, Inc. (formerly known as Severn Trent Laboratories, Inc.) The analytical results associated with the samples presented in this test report were generated under a quality system that adheres to requirements specified in the NELAC standard. Release of the data in this test report and any associated electronic deliverables is authorized by the Laboratory Director's designee as verified by the following signature.

If there are any questions regarding this submittal, please contact me at 802 660-1990.

Sincerely,

A handwritten signature in black ink, appearing to read 'Joe Carabillo', is written over a light blue horizontal line.

Joseph Carabillo

TestAmerica Burlington Data Qualifier Definitions

Organic

- U: Compound analyzed but not detected at a concentration above the reporting limit.
- J: Estimated value.
- N: Indicates presumptive evidence of a compound. This flag is used only for tentatively identified compounds (TICs) where the identification of a compound is based on a mass spectral library search.
- P: SW-846: The relative percent difference for detected concentrations between two GC columns is greater than 40%. Unless otherwise specified the higher of the two values is reported on the Form I.
- CLP SOW: Greater than 25% difference for detected concentrations between two GC columns. Unless otherwise specified the lower of the two values is reported on the Form I.
- C: Pesticide result whose identification has been confirmed by GC/MS.
- B: Analyte is found in the sample and the associated method blank. The flag is used for tentatively identified compounds as well as positively identified compounds.
- E: Compounds whose concentrations exceed the upper limit of the calibration range of the instrument for that specific analysis.
- D: Concentrations identified from analysis of the sample at a secondary dilution.
- A: Tentatively identified compound is a suspected aldol condensation product.
- X,Y,Z: Laboratory defined flags that may be used alone or combined, as needed. If used, the description of the flag is defined in the project narrative.

Inorganic/Metals

- E: Reported value is estimated due to the presence of interference.
- N: Matrix spike sample recovery is not within control limits.
- * Duplicate sample analysis is not within control limits.
- B: The result reported is less than the reporting limit but greater than the instrument detection limit.
- U: Analyte was analyzed for but not detected above the reporting limit.

Method Codes:

- P ICP-AES
MS ICP-MS
CV Cold Vapor AA
AS Semi-Automated Spectrophotometric

Calculation: Percent Wet Weight = $\frac{\text{Weight of Dry Sample (g)}}{\text{Weight of Wet Sample (g)}} \times 100$

Where:

Weight of Dry Sample = (Weight of Dish + Dry Sample) (g) - Dish Weight (g)

Weight of Wet Sample = (Weight of Dish + Wet Sample) (g) - Dish Weight (g)

•

$$\text{Weight of Wet Sample} = (\text{Weight of Dish + Wet Sample}) (\text{g}) - \text{Dish Weight (g)}$$

Re: Laboratory Project No. 29000
Case: CMI; SDG: 137168

Dear Ms. O'Conner:

Enclosed are the analytical results for the samples that were received by TestAmerica Burlington on May 4th, 2010. Laboratory identification numbers were assigned, and designated as follows:

| <u>Lab ID</u> | <u>Client Sample ID</u> | <u>Sample Date</u> | <u>Sample Matrix</u> |
|-----------------------------------|-----------------------------|------------------------|--------------------------|
| Received: 05/04/10 ETR No: 137168 | | | |
| 828857 | CVR3TR1-1-T01N-SOL | 04/29/10 | SOIL |
| 828858 | CVR3TR1-1-T01N-TLG | 04/29/10 | SOIL |
| 828859 | CVR3TR1-1-T02N-SOL | 05/02/10 | SOIL |
| 828859DP | CVR3TR1-1-T02N-SOLREP | 05/02/10 | SOIL |
| 828859MD | CVR3TR1-1-T02N-SOLMSD | 05/02/10 | SOIL |
| 828860 | CVR3TR1-1-T03N-SOL | 05/02/10 | SOIL |
| 828861 | CVR3TR1-1-T04D-SOL | 05/02/10 | SOIL |
| 828862 | CVR3TR1-2-T01N-SOL | 04/29/10 | SOIL |
| 828863 | CVR3TR1-2-T01N-TLG | 04/29/10 | SOIL |
| 828864 | CVR3TR1-2-T02N-SOL | 05/02/10 | SOIL |
| 828865 | CVR3TR1-2-T03N-SOL | 05/02/10 | SOIL |

| 828873 | CVR3TR2-1-T01N-TLG | 04/29/10 | SOIL |
| 828874 | CVR3TR2-1-T03N-SOL | 04/29/10 | SOIL |
| 828875 | CVR3TR2-1-T04N-SOL | 04/29/10 | SOIL |
| 828876 | CVR3TR2-2-T01N-SOL | 04/29/10 | SOIL |

Documentation of the condition of the samples at the time of their receipt and any exception to the laboratory's Sample Acceptance Policy is documented in the Sample Handling section of this submittal.

Total Molybdenum by SW-846 6010B

There were no exceptions to the method quality criteria during the analysis of these samples.

Any reference within this report to Severn Trent Laboratories, Inc. or STL, should be understood to refer to TestAmerica Laboratories, Inc. (formerly known as Severn Trent Laboratories, Inc.) The analytical results associated with the samples presented in this test report were generated under a quality system that adheres to requirements specified in the NELAC standard. Release of the data in this test report and any associated electronic deliverables is authorized by the Laboratory Director's designee as verified by the following signature.

If there are any questions regarding this submittal, please contact me at 802 660-1990.

Sincerely,

A handwritten signature in black ink, appearing to read 'Joseph Carabillo', is written over a light blue horizontal line.

TestAmerica Burlington Data Qualifier Definitions

Organic

- U: Compound analyzed but not detected at a concentration above the reporting limit.
- J: Estimated value.
- N: Indicates presumptive evidence of a compound. This flag is used only for tentatively identified compounds (TICs) where the identification of a compound is based on a mass spectral library search.
- P: SW-846: The relative percent difference for detected concentrations between two GC columns is greater than 40%. Unless otherwise specified the higher of the two values is reported on the Form I.
- CLP SOW: Greater than 25% difference for detected concentrations between two GC columns. Unless otherwise specified the lower of the two values is reported on the Form I.
- C: Pesticide result whose identification has been confirmed by GC/MS.
- B: Analyte is found in the sample and the associated method blank. The flag is used for tentatively identified compounds as well as positively identified compounds.
- E: Compounds whose concentrations exceed the upper limit of the calibration range of the instrument for that specific analysis.
- D: Concentrations identified from analysis of the sample at a secondary dilution.
- A: Tentatively identified compound is a suspected aldol condensation product.
- X,Y,Z: Laboratory defined flags that may be used alone or combined, as needed. If used, the description of the flag is defined in the project narrative.

Inorganic/Metals

- E: Reported value is estimated due to the presence of interference.
- N: Matrix spike sample recovery is not within control limits.
- * Duplicate sample analysis is not within control limits.
- B: The result reported is less than the reporting limit but greater than the instrument detection limit.
- U: Analyte was analyzed for but not detected above the reporting limit.

| 828885 | 30 | 0.98 | 9.99 | 9.48 | 94.3 | 6 |

Calculation: Percent Wet Weight =
$$\frac{\text{Weight of Dry Sample (g)}}{\text{Weight of Wet Sample (g)}} \times 100$$

Where:

Weight of Dry Sample = (Weight of Dish + Dry Sample) (g) - Dish Weight (g)

Weight of Wet Sample = (Weight of Dish + Wet Sample) (g) - Dish Weight (g)

Re: Laboratory Project No. 29000
Case: CMI; SDG: 137169

Dear Ms. O'Conner:

Enclosed are the analytical results for the samples that were received by TestAmerica Burlington on May 4th, 2010. Laboratory identification numbers were assigned, and designated as follows:

| <u>Lab ID</u> | <u>Client Sample ID</u> | <u>Sample Date</u> | <u>Sample Matrix</u> |
|-----------------------------------|-----------------------------|------------------------|--------------------------|
| Received: 05/04/10 ETR No: 137169 | | | |
| 828877 | CVR3TR2-2-T01N-TLG | 04/29/10 | SOIL |
| 828878 | CVR3TR2-2-T02N-SOL | 04/29/10 | SOIL |
| 828879 | CVR3TR2-2-T03N-SOL | 04/29/10 | SOIL |
| 828880 | CVR3TR2-3-T01N-SOL | 04/29/10 | SOIL |
| 828881 | CVR3TR2-3-T01N-SOL | 04/29/10 | SOIL |
| 828882 | CVR3TR2-3-T02N-SOL | 04/29/10 | SOIL |
| 828883 | CVR3TR2-3-T03N-SOL | 04/29/10 | SOIL |
| 828884 | CVR3TR2-3-T04N-SOL | 04/29/10 | SOIL |
| 828885 | CVR3TR3-1-T01N-SOL | 04/28/10 | SOIL |
| 828886 | CVR3TR3-1-T01N-TLG | 04/28/10 | SOIL |

| 828896 | CVR3TR3-3-T03N-SOL | 04/29/10 | SOIL |

Documentation of the condition of the samples at the time of their receipt and any exception to the laboratory's Sample Acceptance Policy is documented in the Sample Handling section of this submittal.

Total Molybdenum by SW-846 6010B

Molybdenum exhibited a low recovery (50.2%) in the spike sample recovery. The method control limits are set at 80-120% recovery. Please refer to report for details.

Any reference within this report to Severn Trent Laboratories, Inc. or STL, should be understood to refer to TestAmerica Laboratories, Inc. (formerly known as Severn Trent Laboratories, Inc.) The analytical results associated with the samples presented in this test report were generated under a quality system that adheres to requirements specified in the NELAC standard. Release of the data in this test report and any associated electronic deliverables is authorized by the Laboratory Director's designee as verified by the following signature.

If there are any questions regarding this submittal, please contact me at 802 660-1990.

Sincerely,

A handwritten signature in black ink, appearing to read 'Joseph Carabillo', is written over a light blue horizontal line.

Joseph Carabillo

TestAmerica Burlington Data Qualifier Definitions

Organic

- U: Compound analyzed but not detected at a concentration above the reporting limit.
- J: Estimated value.
- N: Indicates presumptive evidence of a compound. This flag is used only for tentatively identified compounds (TICs) where the identification of a compound is based on a mass spectral library search.
- P: SW-846: The relative percent difference for detected concentrations between two GC columns is greater than 40%. Unless otherwise specified the higher of the two values is reported on the Form I.
- CLP SOW: Greater than 25% difference for detected concentrations between two GC columns. Unless otherwise specified the lower of the two values is reported on the Form I.
- C: Pesticide result whose identification has been confirmed by GC/MS.
- B: Analyte is found in the sample and the associated method blank. The flag is used for tentatively identified compounds as well as positively identified compounds.
- E: Compounds whose concentrations exceed the upper limit of the calibration range of the instrument for that specific analysis.
- D: Concentrations identified from analysis of the sample at a secondary dilution.
- A: Tentatively identified compound is a suspected aldol condensation product.
- X,Y,Z: Laboratory defined flags that may be used alone or combined, as needed. If used, the description of the flag is defined in the project narrative.

Inorganic/Metals

- E: Reported value is estimated due to the presence of interference.
- N: Matrix spike sample recovery is not within control limits.
- * Duplicate sample analysis is not within control limits.
- B: The result reported is less than the reporting limit but greater than the instrument detection limit.
- U: Analyte was analyzed for but not detected above the reporting limit.
