APPROXIMATE DESIGN: FINAL CONTOURS TO BE DETERMINED AFTER WASTE REMOVAL

LEGEND

NOTES

1. Topographic two (2) foot contours provided by New Mexico Energy, Minerals, and Natural Resources Department.
2. This map is based on the existing conditions and is not intended to be comprehensive as such. Other unmarked openings may be encountered. Exercise extreme caution while traveling on site.
3. Numerous types of physical hazards can be found at this site. In addition to mine openings, hazards include but are not limited to, dangerous mine cases, unstable structures, rocky ground, explosives, and hazardous materials.
4. Elevated levels of unknown radiation are present throughout the reclamation area, especially adjacent to mine wastes.
5. Prior to construction, all areas of disturbance must be pre-approved by the project manager.
